

# HIGH/LOW STRATEGY FOR ONE DECK

## What to Count:

- Start with the count of **0**.
- Add **+1** for the following cards: **2, 3, 4, 5, 6**.
- Cards **7, 8, and 9 = 0**.
- Subtract **-1** for **10, Jack, Queen, King, Ace**.

**Explanation:** When the count is high, the remaining deck is favorable to the player and you should bet more. When the count is low, the casino (house) benefits and you should bet low.

**Question:** Given this scenario, would you bet more or less on your next hand?

**BLACKJACK PAYS 3 TO 2**  
**INSURANCE PAYS 2 TO 1**

*Sands*

**Answer:** Bet more on the next hand.
